

Software Engineering in MovieLaLa (Full-time, Internship)

MovieLaLa (The Most Innovative Startup in the Movie Business) is currently looking for a tech-savvy, software engineers backend or frontend.

MovieLaLa is a totally redesigned social platform for movie lovers. We believe nobody has built the critical social layer- connecting movies, stars and friends all in one destination. In addition, MovieLaLa analytics allows studios to optimize their marketing dollars way before the movie opens theatrically, giving the studios the data (in real time) as early on as possible so they can effectively market and engage directly with the target audience.

We are on the edge of technology. Silicon Valley and MovieLaLa are moving to microservices with node.js, rails, serverless backends in AWS Lambda and in front end also React in web, React Native in Mobile apps

- Technologies and Tools that we use
 - <https://stackshare.io/movielala>
- Our team is in top 20 in San Francisco swift development based on github awards
 - <https://blog.movielala.com/wp-content/uploads/2016/03/github-awards-swift.png>
- One of the best mobile teams from Turkey
